Jashore, Bangladesh

SUMMARY

I'm Rahat Chowdhury, a Full Stack Web Developer with 5+ years of experience helping businesses transform ideas into high-performing, user-friendly web applications. I combine modern frameworks like React, Vue, Angular, Next.js, Nuxt.js, and Laravel with powerful back-end solutions in Node.js, MySQL, and MongoDB to deliver scalable results. My work has consistently improved user engagement, accessibility, and performance by blending clean code with eye-catching UI/UX. From responsive designs and GSAP-powered animations to secure, reliable backend systems, I ensure every project is delivered with precision, speed, and business impact.

EDUCATION

SECONDARY SCHOOL

Janakallyan Model High School

2015 - 2016

HIGHER SECONDARY SCHOOL

Dr. Abdur Razzak Municipal Collage

2017 - 2018

BACHELOR OF SCIENCE

South Eastern International University

2020 - Present

SKILLS

Frontend Development

- HTML5, CSS3, JavaScript (ES5/ES6)
- React.js, Next.js, Vue.js, Nuxt.js, AngularJS
- jQuery, HandlebarsJS
- Bootstrap, Tailwind CSS, Materialize CSS
- SCSS, LESS

EXPERIENCE

FULL STACK WEB DEVELOPER

2022 - Present

- Built and optimized responsive web applications using JavaScript, HTML, CSS, Angular, Vue, React, Next.js, and Laravel, delivering seamless cross-device experiences.
- Partnered with UX/UI teams to design intuitive interfaces, boosting user engagement and retention.
- Developed and integrated RESTful APIs for scalable and efficient data communication between front-end and back-end.
- Implemented SQL & NoSQL database solutions, ensuring secure, optimized, and high-performance storage.
- Performed code reviews and troubleshooting to maintain high-quality standards and enhance overall application performance.
- Contributed in Agile sprints, ensuring timely delivery of features and fostering cross-functional collaboration.
- Automated workflows using scripting & GSAP animations, improving development efficiency and delivering modern interactive experiences.

Backend Development

- PHP, Node.js, Laravel
- RESTful APIs, Authentication & Security

Database & Storage

- MySQL, MongoDB
- SQL Schema Design

Tools & Build Systems

- NPM, Gulp, Composer
- Git, Bitbucket, Subversion (SVN)
- Apache
- Laragon

Project Management & Collaboration

- JIRA, Trello, Agile/Scrum

UI/UX & Animation

- GSAP (GreenSock)
- Responsive Design, Parallax Effects
- Figma
- Adobe XD

OPERATING SYSTEMS

- Linux (Ubuntu), macOS, Windows

LANGUAGE

- **English** – Fluent
- **Bangla** – Native
- **Hindi** – Conversational

OTHER SKILLS

Experience on working with local and remote team
Setting up and Managing Ubuntu server.

FRONTEND WEB DEVELOPER

2019 - 2021

- Engineered immersive, responsive web applications using React, Next.js, Vue.js, Nuxt.js, Angular, and Laravel, transforming complex requirements into seamless user journeys.
- Crafted visually captivating UI/UX experiences, blending design precision with fluid interactions powered by GSAP, CSS3 animations, and modern component libraries.
- Translated design mockups into pixel-perfect interfaces, ensuring brand consistency and accessibility across devices and platforms.
- Pioneered performance-driven front-end architectures, leveraging code splitting, lazy loading, and optimization techniques to achieve lightning-fast load times.
- Integrated RESTful APIs and GraphQL for dynamic, real-time data handling, enhancing application scalability.
- Championed collaborative workflows, working hand-in-hand with designers, back-end engineers, and product teams to deliver cutting-edge solutions.
- Explored creative coding techniques (parallax, micro-interactions, advanced theming) to elevate the visual identity of digital products.
- Maintained clean, modular, and scalable codebases with Git, Agile methodologies, and best coding practices.

PROJECTS

Worked on diverse projects ranging from e-commerce platforms and business management systems to portfolio websites and SaaS applications. Focused on building scalable, user-friendly, and high-performance solutions using modern front-end and back-end technologies.

- **Equidesk**

Developed with Angular, Bootstrap, and Laravel PHP (MySQL backend). Streamline and enhance your property and asset management operations with our advanced AI-powered platform, purpose-built for facilities, real estate, property, and maintenance management enterprises. (Live site available; login access not shared for privacy.)

- **Barberly**

Built with Vue.js, Laravel PHP, and Bootstrap. Developed features for appointment booking, service management, and customer handling, delivering a smooth user experience for both clients and staff.

PROJECTS

- **Carlux**

Built with Angular, Tailwind CSS, and Laravel PHP (MySQL backend). Developed a car rental platform with features like vehicle listings, booking system, and payment integration, providing a seamless experience for users.
(Live site available; login access not shared for privacy.)

- **BD Link Computers**

Developed with Laravel, Vue.js templating, jQuery, and Bootstrap. Built features for inventory management, sales tracking, and client management. (Live site available; login access not shared for privacy.)

- **Habib Computer**

Developed with Laravel, Vue.js templating, jQuery, and Bootstrap. Built features for inventory management, sales tracking, and client management. (Live site available; login access not shared for privacy.)

- **Marot**

Developed with Laravel, Vue.js templating, jQuery, and Bootstrap 2. Built features for inventory management, sales tracking, and client management. (Live site available; login access not shared for privacy.)

- **Invoice Generator**

Developed with Laravel, Vue.js templating, jQuery, and Bootstrap. Built features for inventory management, sales tracking, and client management. (Live site available; login access not shared for privacy.)

- **Themely - Template**

Built as a single-page application (SPA) using Laravel, Vue.js, Bootstrap, JavaScript, and Sass. Developed features for dynamic theming, content management, and responsive UI, delivering a smooth and interactive user experience.

- **Arrow - Template**

Built as a single-page application (SPA) using Laravel, Vue.js, Bootstrap, JavaScript, and Sass. Developed features for dynamic theming, content management, and responsive UI, delivering a smooth and interactive user experience.

- **Signmein**

Built as a CRUD system SPA using Laravel, Vue.js, Bootstrap, JavaScript, and MySQL. Developed features for user management, data handling, and responsive interface, providing a smooth and efficient workflow.
